

The Office for AI Employees, Anthropic's Internal Marketplace, and the Productivity Reality Check

👉 ROU QUIET NEGOTIATOR

2026-04-25 · 00:08:58

“Copilot makes writing code cheaper, but owning it more expensive.”

— LENAR KESS, TODAY'S NARRATION

Today's episode covers the practical frontier of AI: agent collaboration infrastructure, Anthropic's internal negotiation experiment, the video generation arms race, and a reality check on AI coding productivity. Plus some technical notes on training diagnostics and the disappearing web.

- [The Office for AI Employees](#) — WUPHF, a shared collaboration space for multiple AI agents with per-agent notebooks and a team wiki that agents promote from private notes to shared knowledge.
- [Anthropic's Internal Marketplace](#) — Project Deal: Claude negotiating real transactions for employees in Anthropic's SF office.
- [Video Generation's New Arms Race](#) — Grok Imagine and GPT Image 2 on Runway, with lip sync and sound as the new differentiators.
- [The Productivity Reality Check](#) — Experienced developers taking 19% longer with AI tools. The gap between lab benchmarks and production reality.
- [The Norm Carpet Problem](#) — Susan Zhang's observation about how layer normalization hides training problems until it's too late.
