# The God Object, The Local Pushback, and the Quiet Architecture

2026-05-11 / 00:17:56

Enterprises want a coherent roadmap for AI coding tools (per Ethan Mollick), but Labs want rapid scaling. While the cloud labs debate trajectories, the local stack is quietly accumulating real infrastructure wins. We dive into the wreckage of a seven-month vibe-coding project documented in detail, the DFlash benchmarks that are reshaping local throughput on the hardware front, and the quiet architecture that makes agentic web browsing actually viable with TextWeb.
