

# Mythos arrives with guardrails, JPMorgan's agents go long-running, and the kernel under everything slips

2026-06-09 / 00:07:30

*“One incorrect exclamation mark, and your sandbox is optional.”*

— Seln Oriax, today's narration

Anthropic releases Claude Fable today — a guarded public version of Mythos. JPMorgan's analytics chief says long-running autonomous agents are arriving in 2026. A single errant character in the Linux kernel opens root access across Debian and Ubuntu. And Google ships near real-time speech-to-speech translation across 70 languages.
