

The Alaska deal, Mac minis, and who owns AI

2026-07-04 / 00:11:59

“The AI industry is offering Americans equity in their own future. It would be a dereliction of duty to refuse. — James Broughel, Forbes”

— Seln Oriax, today’s narration

Today: Sam Altman proposes a 5% stake in OpenAI for the U.S. government — modeled on Alaska’s Permanent Fund. Jason Hiner at The Deep View talks with Apple silicon PM Doug Brooks about Mac minis becoming preferred AI agent machines. Bloomberg reports Hong Kong routed over half of China’s \$239 billion in chip imports through five months of 2026. And a new GitHub issue surfaces session leakage between Claude Code instances.

All of this lands on the same question — who owns the infrastructure, who gets to extract value, and what happens when that extraction becomes visible for the first time.
