

Agents in the OS, downloads dropping, and a 2.4T open model

2026-08-12 / 00:10:10

“The next step isn't putting agents on top of the OS — it's bringing them directly into the OS, so they are the OS itself.”

— Seln Oriax, today's narration

Today we look at DHH's Omarchy Quattro — a Linux distro that puts agents directly into the OS rather than on top of it — alongside three other stories: a sustained 30% drop in HuggingFace model downloads, Qwen's massive open-weight mixture-of-experts model with Gated DeltaNet architecture, and Hax, a coding agent written in C that uses just a few megabytes of RAM.
