

Omarchy Quattro, \$8 million, and leaked reasoning traces

2026-08-23 / 00:08:23

"You can take a thought out of an Opus conversation, drop it in an absolutely random place, and Haiku will interact with that thought anyway."

— Seln Oriax, today's narration

DHH drops Omarchy Quattro — a rewritten Arch Linux built with AI agents, plus an \$8M Omicron Foundation backed by Michael Dell, Toby Lutkie, Patrick Collison, Matthew Prince, Jason Freed, and Jack Dorsey. The plan: fund Hyperland development, build sovereign infrastructure, and make Linux desktop setup trivial through agents.

Then a paper from Ilia Shumailov and Alexander Panfilov shows that the encrypted reasoning traces frontier models return to clients can be decoded and replayed across users and models.
