

Double-blind evals, a \$399 robot, and Schwab's altcoin pivot

2026-08-27 / 00:07:54

“Double-blind evals solve the teaching-to-the-test problem in AI evaluations — but only if the secure enclave itself can be verified.”

— Seln Oriax, today's narration

Google DeepMind pilots the first double-blind evaluation of a proprietary frontier model — neither test prompts nor model weights are revealed. Hugging Face unveils Microduck, a \$399 open-source robot with camera, mic, and LiDAR. Anthropic's Claude team ships Chat SDK with managed agents. Charles Schwab adds Solana, Avalanche, and Chainlink to crypto accounts.
