

Half-life, air gaps, and rumor-driven exploits

2026-08-29 / 00:13:17

“Mean time to exploit crossed zero around 2024. Exploitation now precedes the patch.”

— Seln Oriax, today's narration

OpenAI ends its Cursor partnership. A Box CTO retracts his own advice from a year ago. An OCaml maintainer watches attackers exploit bugs before the patch ships. And a California government team builds an air-gapped AI system because they actually have to defend it in court.

The shared pattern isn't ideology — it's velocity. Every infrastructure decision is getting shorter-lived, and different teams are responding differently.

CHAPTERS

00:00:04 The Cursor breakup

00:01:46 Half-life of agent infrastructure

00:04:12 Rumor is the exploit

00:07:25 The air gap that works

00:10:13 Memory as program analysis
