

Settlement in motion, weights doing the work

2026-09-24 / 00:08:45

“Harness policy stops being config and becomes weights. Corrections ride along, including the ones you'd have deleted. You can only delete what you can name; the rest ships inside the student, silent.”

— Seln Oriax, today's narration

IBM connects its digital asset platform to Swift's blockchain ledger, letting banks settle tokenized deposits 24/7 without leaving ISO 20022 messaging. Meanwhile Cathie Wood's ARK launches a tokenized venture fund on Ethereum. A Google-PKU paper shows agent harnesses can be distilled into model weights — removing the external system at deploy time while beating it. And Gen Alpha has already decided "that's so AI" is their go-to insult, while Paul Graham catalogs the verbs he uses when talking to ChatGPT.
