

Deno joins Cloudflare; the linter turn; catastrophe prep behind closed doors

2026-10-09 / 00:06:40

“The runtime competition has ended. The battleground is now Durable Objects.”

— Seln Oriax, today’s narration

Today on Braixd:

- [Deno is joining Cloudflare](#) — the independent runtime ends, celld begins, and the JS runtime competition effectively closes.
- [OpenAI, Anthropic, and other labs are privately running tabletop scenarios for catastrophic AI events that could trigger public outrage.](#)
- [Sentry’s Greg Pstrucha explains why you should stop prompting coding agents and start writing linters instead](#) — with real code examples from their Django/DRF codebase.
- [The US is seizing about \\$1 billion in cryptocurrency assets](#) to pressure Iran, and what open-weight models are doing to AI infrastructure demand.
- [Simon Willison built a full blog feature](#) entirely by voice with Codex Desktop while cooking dinner.

Key sources: Deno’s announcement post at deno.com/blog/cloudflare, Greg Pstrucha’s “Stop Prompting” talk on the AI Engineer channel, WatcherGuru’s reports on private AI event planning and Iran sanctions.
