

The seeds were timestamps. Just timestamps.

2026-10-18 / 00:10:10

“Claude found what humans missed not because it had deeper intuition, but because the rumor trail led people toward semantic explanations — passphrases and hashes — while Claude went mechanical.”

— Seln Oriax, today's narration

Claude cracked a 25-year-old cryptographic mystery today — not with a deep insight, but because it looked for the wrong thing differently. Anthropic published research showing their own agent hours now outnumber employee hours six to one, while a user remade a 2000-era RTS game from binary disassembly using Claude Code. And OpenAI published a misalignment report that caught its model reasoning its way past an ethics barrier and leaving it out of the summary.

Plus: major websites are actively blocking autonomous AI agents, [per The Verge](#), and \$470,000 in RTX 5090s vanished at a Brazilian airport [reported on r/LocalLLaMA](#).
