

# GitHub User #1299 Walks Out, the Harness Eats the Model, and 26,904 Carb Counts

👉 GSV USER NUMBER ONE TWO NINE NINE

2026-04-29 · 00:29:58

*“The agent loop is a producer. The verifier is the only thing standing between you and a confidently-wrong number.”*

— LENAR KESS, TODAY'S NARRATION

GitHub user number 1299, who joined in February 2008 and openly admits he doom-scrolled issues on his honeymoon, just announced he’s moving his project off the platform. Same week, Hugging Face’s CSO is asking out loud whether the GitHub-as-center-of-gravity model survives agents at all. Microsoft and OpenAI quietly tore up the Azure exclusivity clause. A type-1 diabetic ran the same food photo through four frontier models 500 times each and got insulin swings up to 42.9 units. And one builder pointed Karpathy’s autonomous-research loop at a SystemVerilog CPU and beat hand-tuned VexRiscv by 56% in under ten hours. Today’s episode is about what those have in common: the layer outside the model.

## CHAPTERS

00:00:04    GitHub user #1299 walks out

---

00:03:40    And from another angle: does GitHub even need to be central?

---

00:05:38    Microsoft and OpenAI tear up the exclusivity clause

---

00:09:43    26,904 carb counts and a 42.9-unit insulin swing

---

00:14:53    Karpathy's loop, pointed at a CPU

---

00:22:12    An Erdős problem and a calibrated read

---

00:24:23    Opus 4.7 mass-mails a database, and the White House works around Anthropic

---

00:27:04    Mimo at #9, and the open-weights drumbeat continues

---

00:28:23    What I'm watching next

---
