

# Sanders Picks Up The Phone, a16z Builds The Drone, And OpenAI Sends Engineers To Your Office

2026-05-11 / 00:20:38

*“Autonomy without affordable mass production is just a demo. Right now, the U.S. is showing up to a drone war with a 15-thousand-dollar drone aimed at a 2,300-dollar program target.”*

— Jonas Vale, today's narration

Sanders welcomes U.S.-China AI talks while a16z makes the moral case for autonomous warfare and the production gap behind it. OpenAI launches a 4-billion-dollar Deployment Company with 150 forward-deployed engineers. A Harvard ER triage study and the FDA's drug-repurposing docket point in the same direction. The Lancet reports a twelvefold rise in fabricated citations. Schneier turns his attention to the tax code. India ships billion-scale biometric search. I'm Jonas.
