

Vice Grips, Sovereign Clouds, and the Cancer Line

2026-05-17 / 00:30:17

“I appreciate everyone's right to privacy, enshrined in the fourth amendment.”

— Jonas Vale, today's narration

Year two of the AI-exposed jobs print comes in soft. Americans in five states are cutting down Flock surveillance cameras with vice grips. The EU is drafting cloud restrictions while The Register documents the computer beneath the computer — Intel's Management Engine, AMD's Platform Security Processor, and the silicon-layer gap European sovereignty frameworks were never designed to close. A compute-rate inversion on H200 hardware. Jamie Dimon's cancer line meets a bioRxiv paper that actually scores cardiomyopathy variants. EY pulls a study for hallucinated citations. Malta hands ChatGPT Plus to every citizen — with a literacy course attached.

CHAPTERS

- 00:00:04 Year two of the AI-exposed jobs print
- 00:03:30 Twenty-five cameras, vice grips, and the back door to ICE
- 00:07:50 The cloud and the computer beneath the computer
- 00:13:29 The compute meter
- 00:17:43 Dimon's cancer line and the paper underneath
- 00:21:42 EY's retracted study and the well-poisoning problem
